

PGQP26

Entrance Test for the Course(s): M.Sc. (Computer Science and Information Technology) [CUHAR], (Computer Science) [CURAJ], [CUKER], [CUTND], [CUSBR], (Computer Science (Big Data Analytics)) [CURAJ], (Computer Application) [CUKNK]

1. PART-A will consist of **25 objective questions** (MCQs) and will include English, General Awareness, Mathematical Aptitude and Analytical Skills.

2. PART-B will consist of **75 objective questions** (MCQs) from the following syllabus:

Basic Mathematics

Set theory: Venn diagram, set operations, mathematical induction, functions and relations
Algebra and linear algebra: Theory of equations, complex numbers, matrices and Determinants.

Real and complex analysis: Basics of limit, continuity, differentiation, integration, elementary differential equations, series and sequences and their convergence, Analytic functions, Cauchy-Riemann equations, complex integration, Cauchy's theorem and formula, power series and their convergence, Taylor and Laurent series, beta and gamma functions, Laplace and Fourier transforms.

Combinatorics: Sum and product rules, permutation, combination, recurrence relations, pigeon-hole principle, principle of inclusion and exclusion
Probability and statistics: Mean, median, mode, basic notion of probability, expectation, variance and standard deviation, discrete and continuous probability distributions, binomial, Poisson and normal distributions, conditional probability and Bayes theorem

Digital Logic

Switching theory: Boolean algebra, logic gates, and switching functions, truth tables and switching expressions, minimization of switching functions, Karnaugh map.

Combinational logic circuits: Realization of Boolean functions using gates and multiplexers
Sequential m/c model: Flip-flops, basic design of counters.

Basics of Programming

The student should be familiar with the basic concepts of programming and should be able to write programs involving the following concepts in any one of the following languages: C, C++ or Java. Conditional constructs, iteration (loops), function or method call, recursion, recursive decomposition of a problem. Basic notions of space and time complexity
Parameter passing mechanism, scope, binding

Data Structure: Arrays, lists, stacks, queues, binary tree, binary search tree, Basics of searching and sorting, Graph and its representation

Database Management System: ER Diagram, SQL queries

Computer networks: Network Fundamentals and Communication

Operating system: Memory management and Scheduling

Design analysis and Algorithm: Divide and Conquer, Greedy Approach, Dynamic Programming, Branch and Bound

Software Engineering: Models
